

## Baudouin: Powering the future

For 100 years, Baudouin has manufactured the highest quality engines for marine and power generation applications.

In the hostile environment of a marine operator, reliability and durability are paramount, and Baudouin has been successfully serving this market since 1918. It's from this marine heritage that Baudouin has a reputation for quality, flexibility and reliability.

Through the 1960s and 1970s Baudouin manufactured complete generator sets and engines for power generation applications for some of the largest generator manufacturers in the world.

In 2008, Baudouin was acquired by Weichai, one of the world's

top automotive and industrial equipment manufacturing groups. Founded in 1946, Weichai's technical capabilities, global footprint, and a strong background in power generation have made this partnership a perfect match.

Today, Baudouin engines operate in some of the toughest environments around the world and it's why marine and power generation professionals trust Baudouin to stay up and running. Our combined expertise in research and development, precision manufacturing, superior quality and reliability, and expansive sales and service support, make Baudouin the ideal partner in the power generation industry.

class single step load acceptance values, minimal derating at altitudes and provide transient response and operational stability allowing for unrivalled power quality.

All of this, with the lowest fuel consumption and extended mean time between overhauls. From high altitudes to hot and dry climates, PowerKit engines are proving their durability and reliability in every environment.

We are so confident in our products that we are able to deliver best-in-class warranties and warranty extensions for all PowerKit engines: two-years unlimited hours for prime power and four years 800 hours for standby power.

All genuine Baudouin spare parts are backed by a one year warranty as standard and are available from stock for fast support. PowerKit Engines are available for global delivery within days thanks to significant stock available in France.

### BAUDOUIN AT MIDDLE EAST ELECTRICITY 2019

Baudouin is proud to be a Gold Sponsor of MEE2019. This year we are showing the diversity of our product range including engines for industrial applications such as water pumps.

We'll have five engines on the stand: 4M06 (18-69 KVA), 6M21 (350-500 KVA), 12M26 (750-1250 KVA), and the stars of the show: the brand-new 16M55 engine and the new 4M11 industrial engine.

The 16M55 engine is the latest product in our range, delivering 3000 - 3750 KVA of power in a very compact package, it offers market leading power density, highly-efficient fuel consumption, and like every Baudouin product, long intervals between servicing.

The 4M11 industrial engine is a new product we are releasing for the industrial market; it is coupled with a water pump which is a typical application for these types of engines.

### MARINE HERITAGE

Baudouin has been in the business for 100 years, designing and building engines for the most punishing environment on earth – the sea. That century of experience, support and quality goes into every Baudouin PowerKit engine.

Marine is our DNA – easy, fast and cost-effective maintenance are imperative in the marine industry. Baudouin PowerKit engines are designed to meet those same requirements.

You can always expect reliability, durability, excellent total cost of ownership and European quality from Baudouin's products.

### THE POWERKIT RANGE

The PowerKit engines cover 18-3125 kVA – a range that few engine manufacturers can match. With nine R&D centres across the world, we are constantly developing new products and improving the range based on local customer and regulatory requirements.

Baudouin offers huge flexibility to customers in the vast power ratings available, as well as providing mechanical and common rail engines to suit the needs of our global customers. It's just the start of the many reasons to choose Baudouin.

### PASSION FOR EXCELLENCE

From the onset, our founder, Charles Baudouin, always envisioned to grow beyond the shores of Marseille and diversify beyond fishing. Even in the early years of the company, Baudouin had powered a canoe from Marseille to Algeria, more than 750 km away! One hundred years later, our ambition to deliver the most robust engines to the world is stronger than ever.

Our completely new and extended product range meets the most stringent emissions requirements allowing us to enter new markets and applications.

Our 200 sales and service points worldwide bring our passion wherever our customers operate.

### CONFIDENCE TO OPERATE ANYWHERE

Purchase a Baudouin engine and you are assured of certified European quality, excellent total cost of ownership, technical support, wherever you operate and best in class lead times

PowerKit engines are designed for global operations, which means every product includes 50°C radiators, heavy duty components, heaters and other options. The engines also have best-in-
